

# Z2010

## Adhesive Technology

Wine producers are looking for ways to make bottles stand out on store shelves, turning to designers to create “premium” style labels with heavier facestocks, embossments, textured materials, foils, and more. These materials can traditionally lift or float when exposed to cold and wet environments such as ice buckets and cold boxes.

Avery Dennison has taken the lead in providing a solution to these key issues with our new Z2010 adhesive technology. Engineered to perform in heavy condensation environments, new Z2010 adhesive provides consistent label positioning and improved ice bucket and cold box performance. Z2010 adhesive features an initial aggressive tack that ensures heavier, embellished labels stay on the bottle. It passes our Ice Bucket Test, meaning the label won't float or show lift for at least eight hours while submerged in a bath of ice water, even with a heavier facestock or embellishment.

Z2010 also offers improved mandrel performance. Compared to S100R, converters will see a 95% performance improvement when using this adhesive for neck labels or other tight mandrel applications.

## Product Information

### Features & Benefits

- Withstands variable temperature and humid environments
- Consistent label positioning on condensated bottles
- Performs at a service temperature range of -30-300 degrees F°
- Maintains label integrity in ice bucket and cold box exposure
- Significantly lower probability of edge lift occurrences
- Improved mandrel performance for neck label applications
- Maintains packaging integrity throughout the value chain
- Improved sustainability benefits by removing APEOs

Spec#	Product Description
B5852	60# CLASSIC CREST NATURAL WHITE WS FSC®/Z2010/1.2M PET
