

A generation ago, the Avery Dennison **EXACT™** program ushered in a virtual revolution in the label industry. By simplifying and streamlining the process for ordering material used in many base products, allowing customers to order only what they needed, a new industry standard was set. You can continue to count on EXACT for high-volume, every-day products we have in stock. You get the exact quantity you need, shipped next day, so you can efficiently stage material directly to your press.

More Services to Help You Serve Your Clients

New programs for unique needs

But as you satisfy shifting customer demands for smaller orders on high-performance items, we're determined to help you optimize your production process through our agile service offerings. We are launching two new programs in April. First, our new **Single Slit Roll service program** provides you easy access to single rolls for 18 unique product specifications (and growing). You can service your client's needs in any width by 2,500-foot lengths.

Second, another new service offering is our **Prototype program**. If you're looking to test a new construction or experiment with a proposed Engineered Solution, our technical team has added new prototyping capabilities that allow us to quickly create unique, small prototype rolls within seven days.

To learn more contact your sales or technical representative.
