# Sustainability Without Sacrifice

More brands are moving toward sustainable packaging so that they can meet consumer demand, stay ahead of regulations and improve the environment. The materials in our Sustainable ADvantage Portfolio make it easy to improve the environmental impact of packaging without sacrificing performance—and in many cases, without paying more.

## Our flagship products and solutions portfolio.

Sustainable ADvantage enables our customers to reduce their environmental footprint, satisfy consumer demand, increase recyclability, and respond effectively to government regulations. As a showcase of our mission to build towards regeneration, Sustainable ADvantage enables circularity, improves environmental performance and facilitates transparency across the entire supply chain. Sustainable ADvantage products enable you to do one or more of the following:

### **Reduction in the use of materials.**

Use what is necessary.

### **Responsibly Sourced.**

Forest Stewardship Council certified paper

### **Enables Recycling, Reuse or Compostability.**

What we use can be used again.

### **Further methods to improve Environmental Impact.**

### **Contains Recycled/ Renewable Content.**

Give a second life to what we have already used.

## Eco Portfolio

The Avery Dennison Eco Portfolio has been developed for this dynamic. It's a growing selection of high quality label solutions that are engineered to be thinner than standard constructions. Made for a wide range of common eCommerce applications, Eco Portfolio solutions help converters, brand owners, and distributors alike increase their productivity, reduce costs, save warehouse and freight space, and improve their sustainability

## Linerless

Release liners and matrix account for more than half of the label waste created during label application. Direct Thermal Linerless labels don't use a release liner. A silicone coating on the facestock means self-wound labels won't stick to those underneath, eliminating the need for liner and matrix.

Reduction in the  
use of materials

## CleanFlake™ Technology

### Enabling PET Recycling

Too much recyclable PET plastic ends up in the waste stream because of contamination from conventional labels, which don't separate cleanly during the recycling process. Our CleanFlake label materials feature a breakthrough adhesive that allows label and package to neatly part ways during the recycling process, improving yields of recycled PET plastic.

## Compostable Labels

The Avery Dennison biodegradable portfolio uses biodegradable and (certified) compostable adhesive S9500 in combination with a range of (certified) paper and biodegradable film facestocks. Avery Dennison S9500 adhesive has been awarded the “OK Compost” certificate under the tracking code S259. This certificate implies that it is recognized as both biodegradable and compostable, and complies with EN13432, European Compostability Packaging Standards for industrial composting.

Enables Recycling,  
Reuse or Compostability

## rPET Liner

Our recycled content liner, which contains 30% post-consumer waste from recycled PET bottles, helps to reduce waste while maintaining performance and quality. Recycled liners offer converters an important differentiator, allowing them to help their customers meet sustainability targets by using recycled content - all without compromising on converting performance or visual aspects.

## Hot Melt Adhesives

The new C4500 and C4510 hot melt adhesives are formulated with renewable agricultural resources. Our C4510 adhesive contains 40% Renewable Content and our C4500 adhesive contains 45% Renewable Content. C4500 is a USDA Certified Biobased Product.

Contains Recycled/  
Renewable Content

**The mark of  
responsible forestry**

## FSC®-certified paper

**The most options anywhere**

We offer the industry's widest selection of FSC®-certified facestocks. More than 80% of the paper products we purchase are made with wood fiber certified by the Forest Stewardship Council®.

We're committed to sourcing 100% of paper fiber from certified sources focused on a deforestation-free future by 2030.

## Heat Seal Reclosure Technology

The heat sealable reclosure system provides direct adhesion of the entire construction to rigid containers, eliminating the need for flow wrapping and requiring significantly less plastic packaging by eliminating both liner waste and clamshell lids. This technology uses up to 30% less material, delivering a more environmentally friendly solution.

# Advancing the Circular Economy

Our Sustainable ADvantage Portfolio grew from our commitment to achieve sustainability in our operations while at the same time leading our industry toward sustainable practices. We develop products with sustainability in mind, from the materials we use to how they're constructed or recycled at end-of-life. By 2030, we plan to achieve 100% recyclability of our products. We invite you to read more about Sustainable ADvantage and our 2030 sustainability goals at [esg.averydennison.com](https://esg.averydennison.com).

Let's find the right products for you.

Our teams love recommending exactly the right Avery Dennison product for your specific applications. To talk more about Sustainable ADvantage products, contact your local Avery Dennison sales representative.
